

TECHNICAL DATA SHEET**RITOCOCO****SELF-POLISHING VARNISH**

RITOCOCO self-polishing varnish is formulated with resins and very selected waxes assuring a flawless polishing over stones, marbles and granites.

This mixture has been studied in order to assure a lasting polish over the treated surfaces, whatever is the environmental condition; according to the laboratory tests a marble treated with RITOCOCO and then exposed for 40 days under the UV lamp doesn't show any change.

RITOCOCO can be applied over all surfaces whereas a mechanical polishing can be hard to carry on: corners, edges, rims, columns, pillars, etc. it can also be used to get the "wet look" on those unpolished materials which have to be displayed: blocks, slabs, pieces of marble.

Using RITOCOCO is not recommended on those surfaces which are subject to trampling because being a varnish can break into pieces if a discontinuous and localized force is applied on it.

How to use

Extremely easy to use: apply with a pad on perfectly dry and polished material, it is enough to lay a thin film without rubbing and if needed apply a second coat after approximately 10 minutes. After 30 minutes from the application the product is perfectly dry.

This information corresponds to our actual knowledge. Nevertheless, as product use conditions are out of our control, we can't take responsibilities of incorrect use consequences. We recommend doing a previous test with the product, where it wants to be applied, to evaluate the results.
